

ABSTRACT OF THE DISCLOSURE

A method for browsing a data communications network includes requesting user data from a user-controlled secure device if a network site that requires the user data is accessed. The request is performed prior to requesting the user data from another device. The method also includes sending the user data to a network server associated with the network site if the user data is received from the user-controlled secure device. According to another aspect, a method for servicing data communications network information units includes receiving user data associated with a network site, using the user data if the user data includes static user data and reconstructing the user data before using the user data if the user data includes dynamic user data.
